

Meet the team

Paul Carpentier, MD, CFCMC

Paul Carpentier, MD, began his medical career as a family physician before specializing in women's health and infertility. He is one of the first family physicians trained in NaProTECHNOLOGY™ and

has been practicing in this field for more than three decades.

Jamey Hutchinson, BSN, CFCP

Jamey Hutchinson, BSN, CFCP is a certified FertilityCare Practitioner as designated by the American Academy of FertilityCare Professionals. She serves as

the coordinator at the Babylon location. She has assisted hundreds women/couples in FertilityCare and has served as a Diocese of Rockville Centre marriage preparation facilitator for natural family planning since 2012. In addition, she is a certified breastfeeding counselor and childbirth educator.

Barbara Meier, BSN, CFCP

Barbara Meier, BSN, CFCP, FertilityCare Practitioner, as designated by the American Academy of FertilityCare Professionals. She is a member of the National Association of

Catholic Nurses and the International Institute for Restorative Reproductive Medicine.

Follow Catholic Health!

chsli.org/gianna-center

The Gianna Center for Women's Health & Fertility is a Catholic guided practice committed to delivering an ethical and scientific-based approach to women's health care regardless of their faith. With this as our promise, we are uniquely qualified to care for women of all ages and at all stages of life.

Our mission is simple—to acknowledge a woman's dignity and to provide exceptional medical care with purposeful attentiveness. Treatments are holistic and include nutritional, sleep-related, weight-related, endocrinological, behavioral, spiritual and medical components.

We provide medical services in a way that is consistent with, and supportive of the Ethical and Religious Directives for Catholic Health Care Services ("Directives"), which specifically articulate a commitment to human dignity and inspire an abiding concern for the sanctity of human life from its very beginning. We do not provide abortions, sterilizations, contraceptives or artificial reproductive technologies, nor do we refer for these services. We will be happy to answer any questions you may have about our care and services.

A unique approach to women's health and wellness.

Creighton Model FertilityCare™ System

The Creighton Model FertilityCare™ System allows women to monitor and understand the day-to-day function of their ovaries. With this easy-to-learn method, women and couples can now:

- Identify the time of ovulation and possible signs that a woman's body is not functioning as well as hoped
- Identify the signs of a woman's fertility in order to successfully achieve or avoid a pregnancy according to their particular needs
- Expect the following success rates to both achieve and avoid a pregnancy
- Fertility-focused intercourse allows 98.5% of couples of normal fertility to achieve a pregnancy within six months*
- When used to avoid pregnancy, the method is 99.5% effective*

- Provide detailed information to a woman's primary physician, allowing specially trained physicians to diagnose and treat underlying reproductive and gynecologic disorders using NaProTECHNOLOGY™.

NaProTECHNOLOGY™ & Gynecological Health

NaProTECHNOLOGY™ is a unique natural medical approach to treating a woman's reproductive and gynecologic disorders. It works cooperatively with a woman's reproductive system to identify and correct a variety of underlying issues. This approach differs from other approaches that manage a woman's reproductive and gynecologic health disorders, often attempting to bypass the problem through artificial technology or by "masking it" with hormonal contraceptives.

The NaProTECHNOLOGY™ approach is unique, because it respects the dignity of a woman and her marriage, while restoring the natural ecology of her body. It is morally acceptable to people of all faiths.

New Hope for Infertility

One of the most exciting applications of NaPro-TECHNOLOGY™ is in the area of infertility. More than 30 years of research into correcting

the underlying causes of infertility have made it possible for NaProTECHNOLOGY™ physicians to help as many as 70%* of infertile couples conceive a pregnancy naturally.

- NaProTECHNOLOGY™ does not create or destroy embryos; thus, is acceptable to people of all faiths
- This unique approach allows married couples to conceive through a natural act of intercourse

By repairing the underlying disorder, it also decreases the occurrence of pregnancy complications and premature birth.

The Gianna Center offers treatment for:

These medical evaluations successfully identify the fundamental cause of a woman's reproductive health difficulties in 95% of infertility cases and strive to correct the abnormalities, restoring a woman's health and reproductive function.

- Recurrent miscarriage
- Menstrual cramps
- Premenstrual syndrome (PMS)
- Ovarian cysts
- Irregular or abnormal bleeding
- Polycystic ovarian disease
- Postpartum depression
- Hormonal abnormalities
- Health during menopause
- Pelvic pain
- Endometriosis
- Male infertility
- Other women's health problems
